

Using :

if LangBracked1 Condition is True LangThenBlock1 .Run Else Run LangElseBlock1 .Run

The screenshot displays the Xlanguage IDE interface. On the left, a grid-based workspace shows a yellow component labeled 'LangRungBlock1'. This component has a top section for a condition, 'EditN1.V', with a value of '10'. Below this are two sections: '< then >' and '< else >'. The '< then >' section contains a block labeled 'LangTehenBlock1'. The '< else >' section contains a block labeled 'LangElseBlock1'. A green callout box points to the condition section with the text 'Condition Bracked LangBracked1'. Another green callout box points to the '< then >' section with the text 'LangTehenBlock1'. A third green callout box points to the '< else >' section with the text 'LangElseBlock1'. A fourth green callout box points to the '< then >' section with the text 'You can delete'. A fifth green callout box points to the top section with the text 'EditN1'. A sixth green callout box points to the top section with the text '0'. On the right, the 'Properties' panel is visible, showing the 'Name' property set to 'LangRungBlock1'. The 'Properties' panel also shows other properties like 'Fill', 'IsRun', 'Position', 'RunVisible', 'ShowExpands', 'Size', 'Stroke', 'Track', 'UseTask', and 'Visible'.
